

Miniature Transmitters

These tiny transmitters are ideal for locating in small cast iron and non-metallic lines and P-traps, or finding septic tanks. They are water resistant and will work with any 512 Hz receiver. A drophead/dropcap attachment is available for attaching to a rod or fishtape. The FM-05 requires a drophead to serve as the battery cap. The FD-10 can attach to a rod with a dropcap, ride in a spring carrier on a power snake, or tape directly to a camera or jetter.
